

Questions for Requirement Analysis

1. What types of inputs should the search bar accept (keywords, product name, category, SKU, brand name)?
2. Should the search update results dynamically as the user types, or only after pressing enter?
3. Should the search show suggestions or autocomplete dropdowns?
4. How should the system handle misspellings or partial keywords?
5. Should the search results be sorted in any specific order (price, popularity, relevance)?
6. What information should be displayed in each search result (image, name, price, rating)?
7. Should filters (size, color, gender, type) be available on the search results page?
8. What happens if no products match the search keyword (message or recommendations)?
9. Should the search support special characters, spacing variations, or case-insensitive input?
10. Are there any performance requirements (maximum response time for search results)?
